SELECTED EXPERIENCE

- Evaluated economic evidence and performed financial analysis in \$50 billion securities class action lawsuit against government's bailout of large financial conglomerate. Performed complex event studies to disentangle confounding information and measure cumulative stock price reactions to bailout related news over various event windows
- Performed damages analysis in numerous Rule 10b-5 and Section 11 securities class actions. Calculated stock price inflation caused by alleged fraud, estimated float available for trading by class members and used various trading models to calculate amount of affected shares of common stock and potential aggregate damages
- Examined complex stocks and options transaction data related to insider-trading lawsuit and performed statistical analysis to filter out market and industry effects and to measure gains related to company-specific price movements
- Evaluated LIBOR panel bank's damages exposure related to manipulation of submissions and analyzed price impact of alleged manipulation on trading of Eurodollar futures and Eurodollar options contracts
- Examined Education Department's proposed methodology for determining whether post-secondary education programs prepare students for gainful employment. Evaluated economic value of higher education by analyzing net present value of incremental lifetime earnings derived from post-secondary degrees
- Analyzed licensing agreements of television distribution rights and compared economic benefits and costs attributable to programming distribution by different carriers
